07 EMPLOYMENT SUMMARY

경력 사항

Period	Company	Role	Scope	Type
2025.02 – 2026.02	**SH Shinhan ESLD Co., Ltd.**	Site administration	Site administration for photovoltaic plants: permits, materials, quality, two corporate websites led as PM	Permanent
2023.04 – 2024.05	**BP Works (Corning Precision Materials)**	Packaging quality	Outgoing inspection of glass materials; standardised inspection criteria	Permanent
2022.11 – 2023.03	**Kyungdong Parcel**	Logistics driver	5-ton freight; warehouse stock and receipt/despatch control	Permanent
2022.06 – 2022.10	**CETI Computer Academy**	Instructor	IT fundamentals and programming; project supervision	Permanent
2012.04 – 2019.03	**HKR (SsangYong Motor)**	Assembly line 2	Vehicle assembly; purchasing and parts quality management	Permanent
2009.04 – 2012.01	**Bakae Medical Foundation**	IT & facilities	Hospital network, servers, HIS and facility maintenance	Permanent
2005.11 – 2009.02	**KARMA STUDIO**	Photography	Commercial photography and retouching; print quality control	Permanent
2004.04 – 2005.10	**Bugang Telecom**	IT operations	KT telecom systems, fault response and customer support	Permanent

17 years 5 months in total across eight employers; all full-time permanent, none contract or dispatch. Salary at previous employers is not disclosed.

08 PROFESSIONAL EXPERIENCE

QUALITY · SITE ADMIN · IT · PRODUCTION 경력 기술서

SITE WEB SH Shinhan ESLD Co., Ltd. — Site administration · photovoltaic plants

2025.02 – 2026.02

- Site administration for photovoltaic power plants: on-site process support, permit and licensing documents, coordination with authorities, issue handling.
- Material supply and receipt, quality management (standard checks, defect issues); tracked materials and open issues in Excel and wrote the reports.
- Led the build of two company websites, parent and subsidiary, as PM: selected the outsourced development vendor, managed contract and schedule, and directed the content and design direction (launched Dec 2025 / Jan 2026).
- Left 11 business-process documents, 16 construction case studies and five years of delivery records.

Excel · AutoCAD · permits · web build

QUALITY BP Works (Corning Precision Materials) — Packaging Department · inspection

2023.04 – 2024.05

- Improved the outgoing packaging inspection process and standardised quality criteria, cutting variation between shifts.
- Built a defect-type root-cause system and used the data to find where problems started, improving inspection efficiency.
- Coded defect types, summarised them in Excel VBA, and wrote the inspection procedure down at the bench.

QC Tools · Excel VBA · ISO

LOGISTICS Kyungdong Parcel — Logistics Department · driver

2022.11 – 2023.03

- Analysed the main delivery routes and re-planned them, cutting delivery time and fuel cost.
- Contributed to a better warehouse stock system, reducing receipt and despatch errors and losses.

WMS · GPS route management · stock counts

IT CETI Computer Academy — Academic affairs · instructor

2022.06 – 2022.10

- Taught practical HTML, CSS, MySQL and GitHub to students with no IT background.
- Reworked the curriculum to the students' level and kept assignment feedback in writing.

HTML · CSS · MySQL · GitHub

PRODUCTION QUALITY HKR (SsangYong Motor) — Assembly Line 2

2012.04 – 2019.03

- Worked on the vehicle assembly line checking incoming parts and making defect calls with purchasing and parts quality staff.
- Managed parts flow and stock in SAP ERP and organised recurring bottlenecks on the line to improve work efficiency.
- For each defect recorded photographs, quantity and time of occurrence, sent them to the supplier and followed the countermeasure until confirmed.

SAP ERP · Lean manufacturing · supplier follow-up

IT Bakae Medical Foundation — IT & facility management · team leader

2009.04 – 2012.01

- Ran the hospital network, servers, HIS operations and facility maintenance, and managed team members and shift assignments.
- Simplified the internal IT support process, shortening response time for failures.

Servers · Cisco network · MySQL · HIS

PHOTOGRAPHY KARMA STUDIO — Photography and editing

2005.11 – 2009.02

- Commercial photography, lighting and retouching (Photoshop, Lightroom), keeping colour and brightness consistent across deliverables.
- Managed deadlines on large commercial shoots and reduced rework through print quality control.

Photoshop · Lightroom · DSLR

IT **Bugang Telecom** IT operations · KT telecom systems 2004.04 – 2005.10

- Maintained the KT telecom IT systems and equipment, handled fault response and customer support.
- Organised customer request handling, cutting response time and complaints.

KT systems · CRM · networking

PART 2 · COVER LETTER

A STANDARD LEFT BEHIND CHANGES THE SITE

자기소개서

4 QUESTIONS · ASAN, KOREA

1 Why all eight were full-time

My name is Eunsung Kang. I have spent 17 years and 5 months in full-time work, and most of it on the floor of a plant, a warehouse or a site. I started in IT, moved into vehicle assembly at SsangYong Motor for 6 years 11 months, inspected the outgoing packaging of glass materials at Corning Precision Materials, drove and managed freight at Kyungdong Parcel, taught IT to adults, and most recently handled permits, materials and schedules for photovoltaic power plants.

The products and the job titles changed every time. **What did not change was the actual work**: go and see the problem, agree a standard with the people around me, write it down so it survives me, and use the numbers to find where the problem started. That is the part of the job I am good at, and it is the part I want to keep doing.

2 Coding the factory floor

At Corning Precision Materials, inspectors judged the same product slightly differently, so the same item would pass with one person and be sent for a second look by another. I grouped defect types, gave them codes and summarised them in Excel so the frequent ones became visible, then wrote the inspection procedure down and put it beside the bench. Arguments over the same issue became fewer and new staff learned faster.

At SsangYong Motor I checked incoming parts with purchasing and quality staff. When a part did not meet specification the line had to stop for a decision, so I recorded photographs, quantity and time of occurrence, sent them to the supplier and confirmed the countermeasure. After 6 years 11 months on the same line I knew which defects appear at which process, and I learned that **written criteria and the sense gained on the floor have to be used together** or judgement drifts.

At my last employer I handled permit documents, authority coordination, material supply and contractor schedules for power plants, and I also led the build of two company websites: choosing the vendor, managing contract and schedule, preparing the content and deciding the design direction. Different work, same method — decide what has to be true, put it in a document, and follow it until it is finished.

3 Few words, finished work

My strength is diligence. I was born in Pyeongtaek and never missed a perfect-attendance award or a full attendance record at school. That may sound like a small thing to say, but keeping a standard comes down to turning up at the same place every day and repeating the same procedure. I have never been absent without notice in any of the eight workplaces.

The gap I am aware of is depth in a single specialty. I have worked across production, quality, logistics, IT and site administration rather than staying in one field for 17 years. That gives me an understanding of how the departments around me actually work; what it costs me is that I have to learn the technical detail of a new field from the beginning. I read procedures and specifications carefully, ask until I understand, and write down what I am told so I do not ask twice.

4 Ask once, write it down

In the first month I would learn how the site runs: who does what, where work stops, and which documents actually govern the job. Then I would take the part I am given and make it visible — a checklist, a tracking sheet or a short written procedure — so that the state of the work can be seen by anyone without asking me.

I do not need a title to start. What I want is a place where the work has a standard and someone has to keep it, and where being careful and finishing things is worth something. With 17 years and 5 months of full-time experience, I intend this next position to be a long-term commitment.

22 November 2026 **Applicant: Eunsung Kang**

ONE PAGE

WHERE THE STANDARD WAS MISSING, I DREW THE LINE.

Photovoltaic site administration, glass quality inspection, vehicle assembly, hospital IT, and two corporate websites. The product and the title changed every time. The work did not — see the problem, set the standard in writing, follow it to the end.

17 yrs 5 mos	8 employers	2 sites	9 licences
Total experience 8 employers, all full-time	Every one permanent no contracts, no dispatch	Corporate websites led planning, vendor, content, design (PM)	Certificates and licences Class 1 Large · forklift under 3 t

"THE LINE" · STENCIL, 2026 · DRAWN FOR THIS PAGE

Drawing the line

Differing inspection calls, work that stopped between the document and the floor, knowledge the next person had to learn again — none of that happened because anyone was careless. It happened because nobody had drawn the line. That is the side of the work I have been on for seventeen years.

— EUNSUNG KANG

01 QUALITY — Judgement, coded and written down

BP Works (Corning Precision Materials) · 2023.04 – 2024.05

PROBLEM The same sheet of glass could pass with one inspector and go back for a second look with another.

DID I split defect types into codes, summarised them in Excel VBA, and wrote the inspection procedure down beside the bench.

LEFT **Defect types standardised · fewer re-inspections · new staff settled in sooner**

02 FIELD · SITE — Paper and parts, held to the end

SH Shinhan ESLD, site administration · 2025.02 – 2026.02

PROBLEM One late permit document holds up the whole site.

DID I tracked permits, authority meetings, material deliveries and contractor schedules in one sheet and read it every morning. Drawings I read in AutoCAD and worked with the site at that level.

LEFT **Permits, materials and schedule visible in one sheet · 11 process documents left behind**

03 WEB · PM — Two doors, built with a vendor

SH Shinhan ESLD · 2025.02 – 2026.02

PROBLEM Parent and subsidiary had no website; two had to be built from nothing.

DID I selected and managed the outsourced developer, ran the contract and schedule, and directed the content — 16 construction case studies, five years of delivery records — and the design, as PM.

LEFT **Parent site Dec 2025 · subsidiary Jan 2026 — sh-shinhan.co.kr / sh-ent.co.kr**

AVAILABILITY
